Peter's journey through Europe

Erasmus+ Project KA229 "First Aid in School Teaching and Training"
FAST - 2020-1-CZ01-KA229- 078299_1

Petru took the train to the capital of Romania Bucharest.

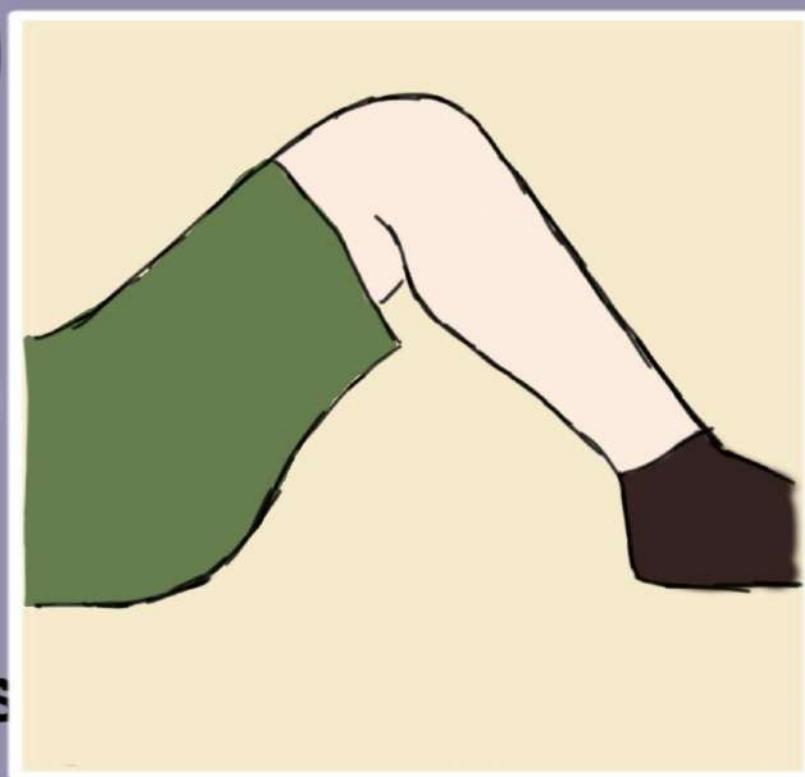

From there, he was supposed to take the bus to Latvia, but he fainted from all the emotions.

The stranger that helped Petru checked for vital signs and then elevated his limbs in order for blood to flow to the brain. He then moved the boy on the bench and waited for him to wake up.

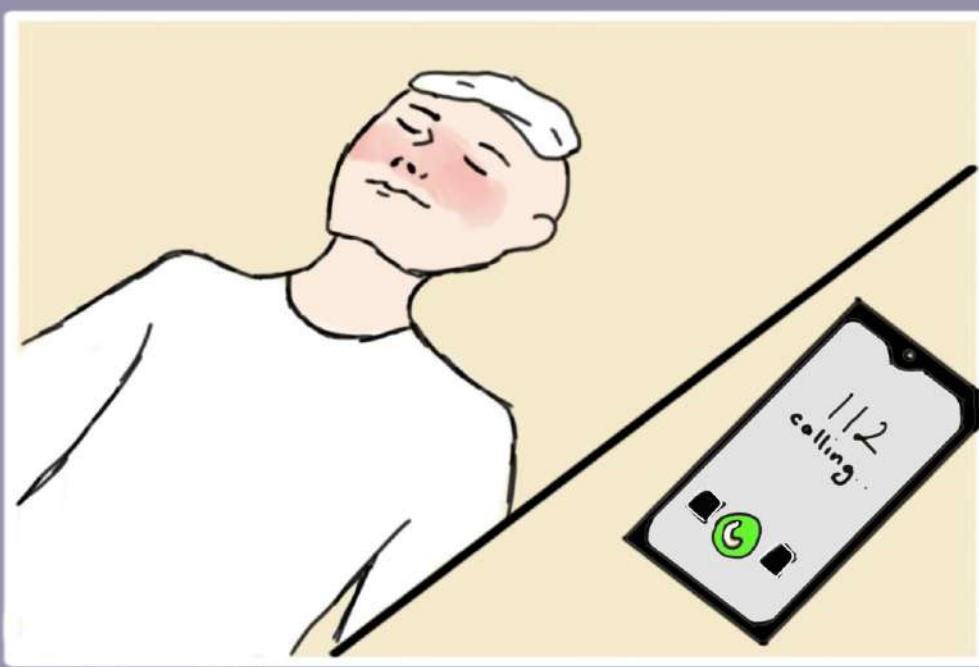

And don't forget:

1. Ensure personal safety
2. Unbutton tight collars, belts, and other restrictive clothing

3. Check vital signs
4. Elevate lower limbs

5. Provide access to fresh air
6. Apply cold linens to the forehead

7. If the condition does not improve, call an ambulance

But instead
of going left,
Peter went
right

That was a very
good sleep. I wonder
where we are.

After accidentally arriving in Turkey, Peter called his friends and asked for advice. They suggested he take the train to Serbia and go by bus from there.

Hi! I took
THE WRONG
BUS AND I'M
NOW IN
TURKEY.
WHAT
SHOULD I DO?

Dear passengers,
in about an hour we'll
reach our destination
in TURKEY

TURKEY?

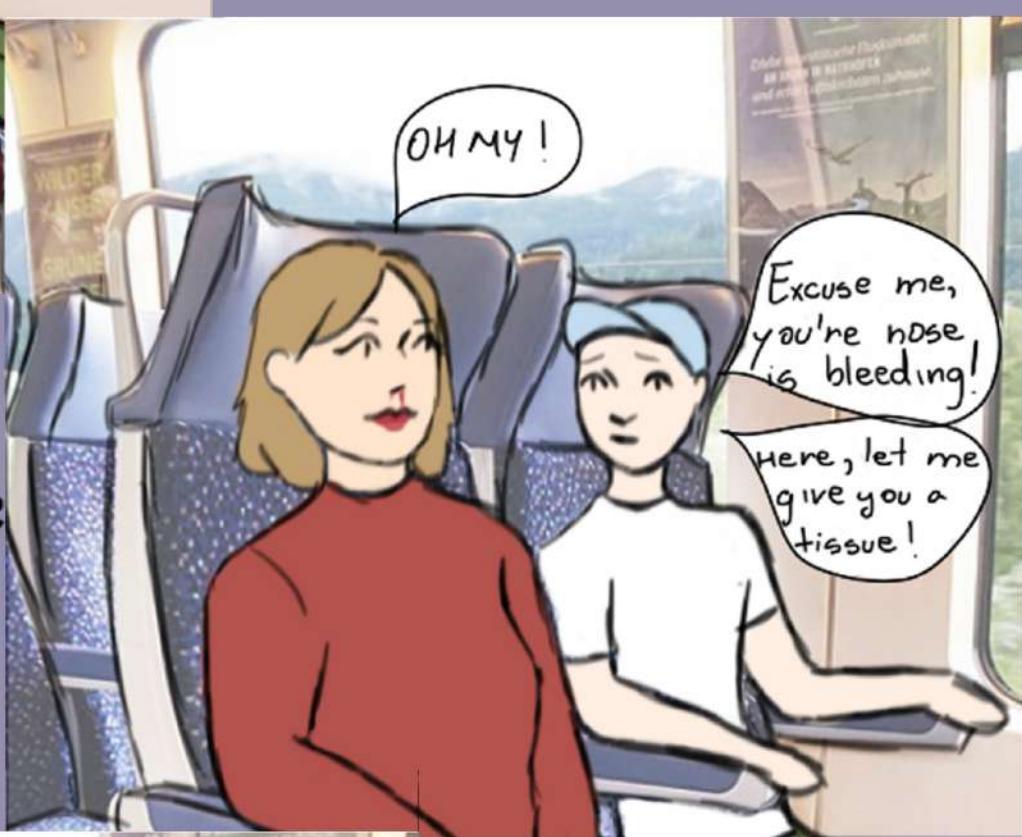

Peter was in the train when he noticed that the lady sitting next to him had a nose bleed.

He hurried to help !

He advised the lady to pinch her nose and breath through her mouth.

To show her gratitude, the lady gave Peter a First-Aid book.

The boy studied it on the way to Serbia.

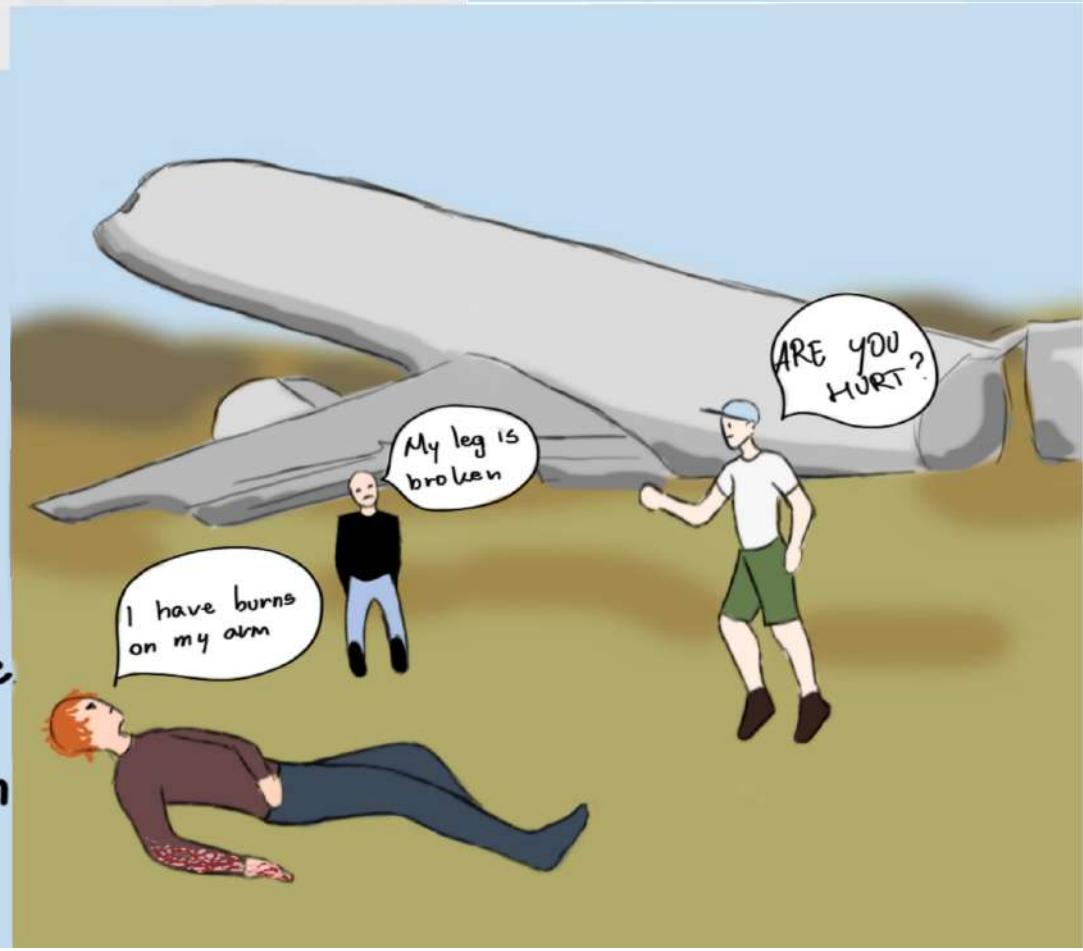

On his way to the bus that would take him from Serbia to Latvia, Peter noticed a weird plane.

The plane crashed and Peter ran to the crash site as fast as possible.

Arriving there, Peter called the ambulance. Then, Peter went to help the man with burns.

Peter remembered what he had read in the first-aid book the lady in the train gifted him

Right away Peter started taking care of the burn.

Firstly, he removed the sleeve of the man's shirt and then rinsed his arm with cold water.

Peter then covered the wound with a clean cloth.

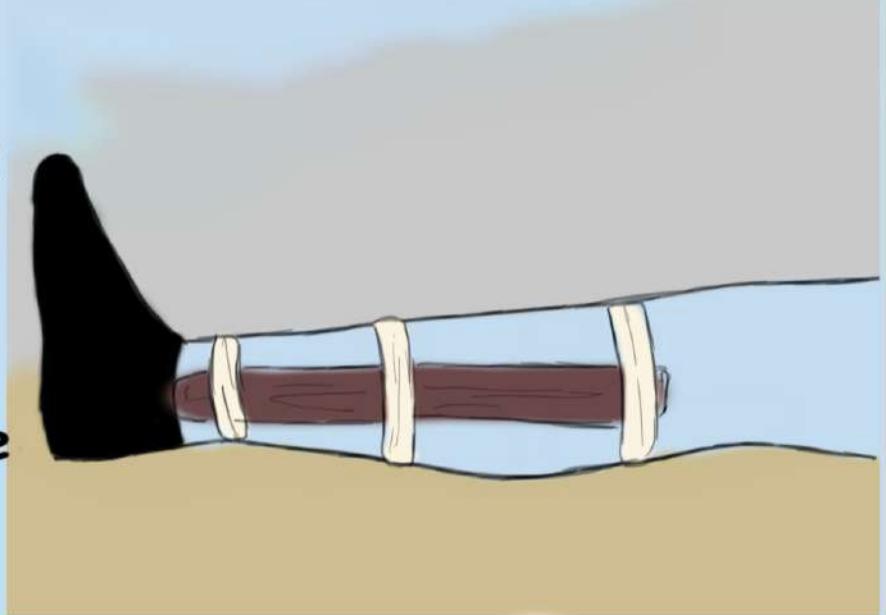

In a few moments, Peter went to help the other victim

Peter determined that the fracture was closed and then moved the man's leg into the right position.

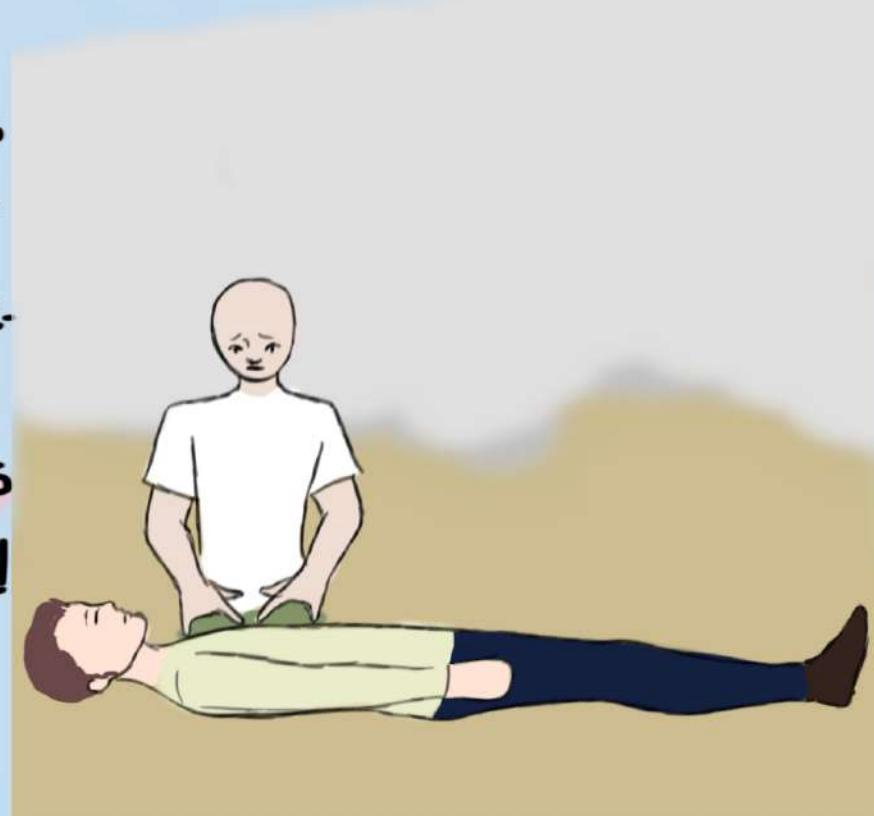

By using a piece of wood and some cloth, Peter managed to make a splint and immobilize the man's leg.

While waiting for the ambulance to arrive, Peter decided to look around. Behind the plane he found an unconscious person.

After concluding that the person was unconscious, Peter put his head near the victim's head, with his eyes toward the man's chest. Like this he could determine if the man was breathing or not.

Peter found the right place on the sternum and began the procedure. At a pace of 100-120 bpm Peter began to press the man's chest, pushing it 5-6 cm in.

After a set of 30 compressions Peter checked the man's condition and continued performing CPR until the man began to breath again.

In a short while,
the ambulance came
and transported the
three to a hospital in
the Czech Republic

After reaching the
Czech Republic, Peter
took the bus to Latvia,
where he met his friends
from the Erasmus+ project.
